

Appln. No. 10/541,170
Second Preliminary Amendment
Dated 02/26/2007
Replacement Abstract

ABSTRACT

A U-shaped sealing strip arranged for mounting on a frame structure of a vehicle surrounds a space which is intended to receive a pane and which has a lengthwise changing depth dimension. The U-shaped structure comprises two L-shaped shaped parts of which at least one has a generally L-shaped configuration and comprises a base part intended for fixing on the frame structure and a side part extending perpendicular thereto. At least one of the two shaped parts is adjustably fixed on the frame structure for adjustment in a direction perpendicular to the surface of the pane in such a way that the contact pressure of the sealing lip is adjustable. The contact pressure of the sealing lips on the pane can be adjusted in a simple manner in accordance with specific requirements in order to secure a reliable sealing effect as well as to reduce wear.
